

Again this year, you will find the subjects and content of the Viscom Technology Forum to be multifaceted and highly topical. Naturally, automatic optical inspection (AOI) and automatic and manual X-ray inspection (AXI/MXI) take the foreground with their many-sided application possibilities. In these areas, Viscom relies on continual innovation and has a lot of news to report.

Furthermore, you can look forward to exciting presentations on subjects such as a mutual interface and communication protocol on the way to Industry 4.0, challenges the new "Wearables" product category poses for electronics production, or even the threats posed by industrial espionage and cyberterrorism. Our guest for the keynote speech offers compelling insights into the workings of the internal secret service of the Federal Republic of Germany, from which he derives principles for dealings with other people.

Our tutorials, where newcomers and enthusiasts directly experience the advantages of ultra-modern systems for AOI, AXI and MXI are not to be missed. Of course, the evening Get-Together with an appetizing buffet and first-class entertainment is also on the agenda. You will find all the details in the event program that is available under the following link: [www.viscom.com/TF-EN-01](http://www.viscom.com/TF-EN-01).

If you need to reserve a room, we request that you make your hotel reservations through Viscom. A registration form with select overnight accommodations can be found on our landing page under the link above. Closing date for registration is May 29, 2017.

We look forward to your participation!

Yours sincerely,

Martina Engelhardt  
Marketing Manager
